HEARTY RISE

2022

HR HEARTY RISE

We are proud to announce that the Hearty Rise GmbH now for all of Europe as a distributor of the Hearty Rise brand responsible is.

In addition to the existing rod series, we can now also offer you series designed mainly for the French market.

Especially in the marine area, our offer has expanded enormously, but also in the trout area there are some interesting novelties to be found in this catalogue.

The heart of our rods is Hearty Rise's high-end carbon V-NETIII technology, always lighter, more resilient and more solid!

We are responding to the demand for cheaper entry-level rods with the new Red Shadow Series complied. Hearty Rise quality at an entry-level price.

We have also greatly expanded the range of travel rods. You can find at us models for all types of predatory fish.

Each rod series has been processed with the utmost care and the technical and innovative designs will delight anglers.

We wish you a nice and successful season!!

Your Hearty Rise team

TECHNOLOGY HEARTY RISE

The Hearty Rise (HR) brand is Etouh's own high-end brand. Etouh mainly produces high-end rods for numerous renowned Japanese brands and Hearty Rise. For almost 40 years, the production quality has been increasing and the processing of the carbon mats is constantly being refined. Processing methods such as NVC, SNVC and Nano NVC, as well as the NET-V winding systems are an example of the company's know-how. The European range is specially designed for fishing in Europe and the know-how of our pro staff and fishing guides has been incorporated into the products.

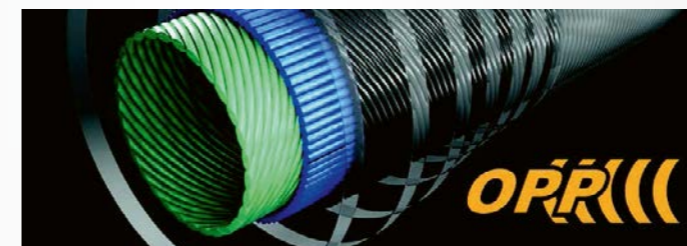

NVC AND NVC CARBON QUALITY

To combine lightness and performance, Hearty Rise works on the complex balance between reducing resin and increasing carbon modules. The result is a very high density material that produces lighter, thinner and extremely high performance blanks! The NVC and SNVC processes reduce the amount of resin and increase fibre tension.

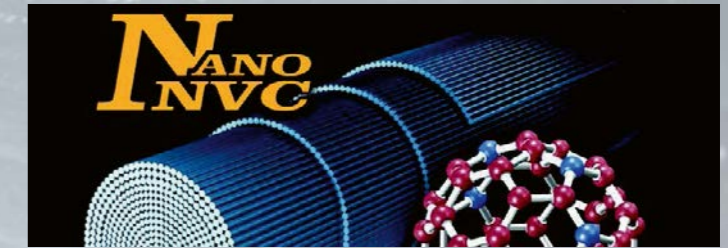

V-NET II CARBON ASSEMBLY

The V-NET II uses the best materials from Japan and optimises the carbon winding. The multi-angle weaving of the fibres was studied to increase the power reserve and improve the morphological memory of the blank by 15% compared to the V-NET 1. Its advantages are torsional strength, power and resonance.

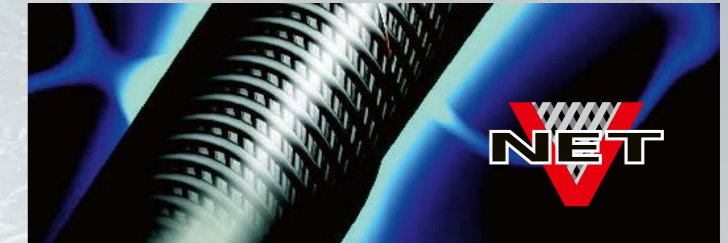

MANUFACTURING OF THE OPP BLANK

With this technology, a technical finish is applied after the carbon layers have been wound. The thin OPP film preserves the effect of the blank while protecting it from scratches and impacts. Without the classic addition of paint and varnish, the resonance of the blank is enhanced and the felling of the bite is at its peak.

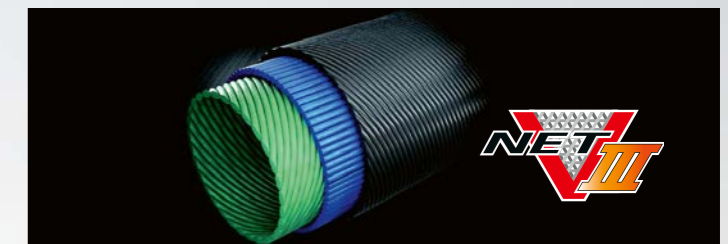

NANO NVC-RESIN

Nano NVC uses nanostructured polymers to create a denser resin with more effective adhesion. This compact resin is better distributed across the carbon layers. It brings improved conductivity for a better feel of the bite and the bottom. The carbon is lighter, thinner and at the same time more sensitive.

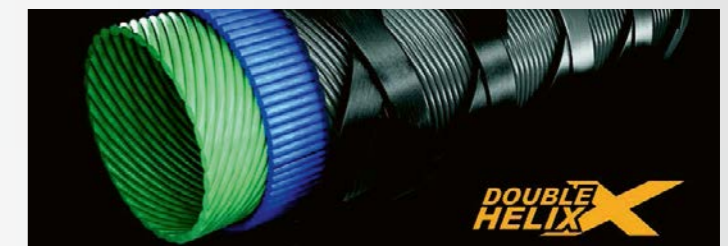

V-NET CARBON ASSEMBLY

V-NET Carbon is characterised by a complex 45° winding of the layers. This ultra HD braided carbon structure equips both the rod and the handle section and provides significantly increased power. Bite transfer is instant, regardless of the length of the blank.

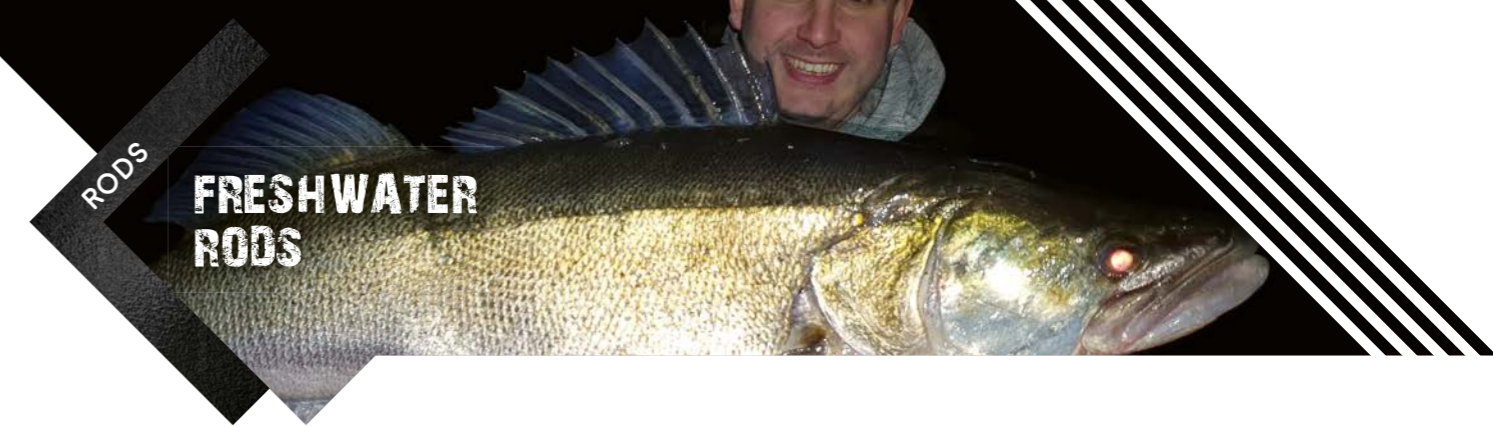

V-NET III CARBON ASSEMBLY

The V-NET III is a further development of the complex carbon fabric V-NET II. This technical construction consists of three diagonal, vertical and reverse diagonal fibres. This construction makes it possible to combine two opposing characteristics: the strength of the blank and the lightness. The action is extremely fast and provides a unique bite sensation!

REINFORCEMENT DOUBLE HELIX X

The Double Helix X is a reinforcement of the carbon blank by adding a double cross structure. The X shape of the blank makes the rod more responsive and stable. The memory of the blank is perfect and durable. Whether casting or tensioning a big fish, the rod is more responsive and the power reserve is increased by 20%!

TOP GUN PRESTIGE SPINNING

The aesthetics and action of the Top Gun Prestige rod make it a real collector's item. The use of Fuji KL Titanium rings, the thinnest and lightest guide set of the famous Japanese brand, makes the rod a lightweight. The NET-V III blank gives it enormous stability and power. The very ergonomic futuristic handles provide a good grip on long casts. The incredible finesse and extreme resonance of these rods make you feel the slightest touch.

TOP GUN PRESTIGE CASTING

The aesthetics and action of the Top Gun Prestige make them real collector's items. The Fuji KL Titanium rings are equipped with the thinnest and lightest guide set of the famous Japanese brand. This ultra-light equipment allows the blank to fully express itself in V-NET III. The very futuristic and ergonomic carbon handles allow a good grip on long casts. The incredible finesse and extreme resonance of these rods make them feel the slightest touches.

RODS

FRESHWATER RODS

RODS

FRESHWATER RODS

INNOVATION SPINNING

The new top rod on the rod market is "Innovation". The attributes of this rod are very light weighted and Powerful. This rod is very fast and the sensibility the top is phenomenal. You can feel smallest contacts! The rod is with a 200 gr reel (e. g. 3000 Vanquish) perfect balanced. The casting range is great and the workmanship is top. Only the best: NET-V III, SNVC Carbon Material., 4 axis carbon cloth, Fuji Titanium Torzite guides, Fuji Seat.

PREDATOR III SPINNING

By using the new NET-V III technology and a brand new FUJI ring set (FUJI SIC-S, K-Series), we have been able to reduce the weight by approx. 10 - 25 gr depending on the model with the same ruggedness and resilience as in the previous model. The action of the rods, we have essentially left as it was at the II model. The Predator III has an ultra fast taper, an 'extreme power blank construction' with a 1: 6 bend ratio (bend-curve ratio). This provides a quick bite response, allowing for easy bait guidance and accuracy in ejection.

PRO FORCE II SPINNING

The Pro Force II impresses with its speed and backbone without losing sensitivity at the top. This rod series is suitable for almost all types of fishing with artificial lures. The pronounced tip action makes jiggging a lot of fun. We round off this series with good equipment and a very good price-performance ratio.

VALLEY HUNTER SPINNING

The Valley Hunter series is a beautiful and very light rod series. There are models for all freshwater predators. The asymmetrical division leads to a great action. The models can be loaded a little more than specified. The baitcast rods start at 10 gr and now stop with a 140 gr jerk rod. The components are great. Fuji SIC guides and reel seat. The new NET-V III technology was used for the blank.

BLACK FORCE SPINNING

In recent years, the demand for a low-priced all-round spinning rod series has increased enormously, both in freshwater and saltwater uses. In the new Black Force series, we now do just that without sacrificing Top Hearty Rise quality. The action of the rods is fast, but not too fast. It polarizes less. Just a balanced allround rod that can be used for almost any purpose. Whether perch, pikeperch, pike, pollack, coalfish, seabass or cod. She always works well.

CARP RODS

CARP FORCE LR ROD

With the Carp Force, we are launching a tournament rod that has the perfect characteristics for a long cast and excellent playing characteristics at the same time. The rod loads perfectly at 130-140 gr and takes the bait to around 150 m. At the same time, the tip is so soft that you hardly have to reckon with losing the fish. This rod also works very well for beginners. Even if you don't have much longdistance casting experience, you can easily cast the bait to 120 meters. It forgives a lot of handling mistakes. Perfect for the ambitious competition angler or when you have to go far. Thanks to the Fuji SIC K Stainless guides, the rod has a very good price/performance ratio.

SLOW JIGGING III S X TOKAYO

The Slow Jigging III series has been developed with the latest generation Toray CA T1100G carbon fibres, coupled with nanotechnology and reinforced with Double Helix-X. This conceptual blank combines finesse, power and progressive action like never before. The oversized roll holder in Maziora colour carbon is particularly ergonomic. The silver wire backed Fuji K Titanium rings use the highest quality ceramic: Torzite. Designed by our Malaysian friends at Hearty Rise for extreme slow jigging, their light weight, slimness, handling and power make these extreme rods a jewel of engineering.

RODS

TRAVEL RODS FOR EXOTIC FISHING AREAS

SKYWALKER SLOW JIGGING SPINNING

Due to the very high demand for Norway anglers, this rod has now also been designed for stationary reels.
